

'Jennifer Wood became ill with severe radiation sickness in 1996 with the advent and wide commercial proliferation that year of cell phones, towers and wireless devices in her Hawaii apartment complex, while working as a healthy licensed architect of many years. She experienced many torturous symptoms and dropped from 120 pounds to 77 pounds nearly dying in late 1996 through 97. After leaving Hawaii for treatment and a more protected environment she slowly gained weight and slightly improved but became severely ill again in 2006-2007 and again in 2010, each time losing 30 to 60 pounds and nearly dying after repeated exposures and increased levels of RF/Microwave radiation in the environment. She has been exiled 32 times since then, having to move due to encroaching radiation, and finally hand built, solo, while very ill, a tiny, non-electric cabin on skids so that it could be moved from place to place. With the advent of global WiFi deployed from space being currently built, she is running out of safe places to go and is threatened by the possibility of another bout of sickness, emaciation and possibly long, slow painful death if no safer place can be found as previously.'

First photo of me emaciated at 77 pounds on a guney with caption Radiation Kills. *—this is the pdf file named “Wireless Radiation Kills.”*

Second pic of me much recovered after going to a "radiation-free" hollow. *—this is located on the next page.*
